

EmmaBeyer_A01_Introduction.Rmd

Emma Beyer

OVERVIEW

This exercise accompanies the introductory material in Environmental Data Analytics.

Directions

1. Rename this file `<FirstLast>_A01_Introduction.Rmd` (replacing `<FirstLast>` with your first and last name).
2. Change “Student Name” on line 3 (above) with your name.
3. Work through the steps, **creating code and output** that fulfill each instruction.
4. Be sure to **answer the questions** in this assignment document.
5. When you have completed the assignment, **Knit** the text and code into a single PDF file.
6. After Knitting, submit the completed exercise (PDF file) to the appropriate assignment section on Sakai.

1) Finish setting up R Studio

Install TinyTex

Now, run this code cell the same way. This will install “tinytex” – a helper app that allows you to knit your markdown documents into professional quality PDFs.

Set your default knit directory

This setting will help deal with relative paths later on... - From the Tool menu, select **Global Options** - Select the RMarkdown section - In the “Evaluate chunks in directory”, set the option to “Project” (If you don’t see this option, try restarting RStudio.)

2) Discussion Questions

Enter answers to the questions just below the `>Answer:` prompt.

1. What are your previous experiences with data analytics, R, and Git? Include both formal and informal training.

Answer: I have experience with R, data cleaning, and basic knowledge of GIS from my undergraduate education. I never had a formal data analytics class, but each class would teach me a little bit about R. I have no experience with Git.

2. Are there any components of the course about which you feel confident?

Answer: I feel confident about using R. I graduated in 2021, so I'm a bit rusty with R but I'm excited to review this in class.

3. Are there any components of the course about which you feel apprehensive?

Answer: I'm excited to dive deeper into data analytics and get more of the background information. I feel like I have a basic overview of many things, but I want to have enough of an understanding to be able to run my own analysis. I also have zero experience with Git, so that will be a bit of a learning curve.

3) GitHub

Provide a link below to your forked course repository in GitHub. Make sure you have pulled all recent changes from the course repository and that you have updated your course README file, committed those changes, and pushed them to your GitHub account.

Answer: https://github.com/emmabeyer/EDE_Fall2023.git

4) Knitting

When you have completed this document, click the `knit` button. This should produce a PDF copy of your markdown document. Submit this PDF to Sakai.
